

VALUE ENGINEERING

Installing or upgrading a utility supply presents a number of challenges: from assessing load requirements to negotiating favourable costs with utility distribution companies, mastering the utilities industry can prove to be a difficult feat. Expert knowledge, insight and understanding are required to ensure maximum value for money and minimum hassle.

With more than 12 years' experience in our specialist field, UPL are recognised as experts within the utility sector. As a wholly independent organisation, we are able to offer impartial advice and dedicated management services without allegiance to any utility contractor. The result? A professional, balanced approach which guarantees a practical, cost-effective solution.

At UPL, we capitalise on our industry knowledge and expertise to deliver outstanding results to clients across the UK. After establishing the most feasible point of connection to an existing utility supply, we skillfully negotiate connection charges to ensure the most cost-effective result. We also design and manage utility infrastructure projects and expertly appoint the most suitable contractors for each individual scheme.

VALUE ENGINEERING AT UPL

- Our expert analytical skills enable us to eliminate unnecessary reinforcement costs without affecting the function or operation of the project.
- Completely independent from all utility suppliers, our impartiality guarantees the most practical, cost-effective infrastructure solutions.
- Years of experience in the utilities industry has enabled us to develop comprehensive route-planning and design strategies.
